Discover an innovative coating  
**VIRUS PROTECT**

that provides lasting protection against viruses, bacteria and fungi that cause infections.

THE SAFETY OF VIRUS PROTECT  
IS CERTIFIED BY

World Health  
Organization

#### **WHAT IS AND HOW DOES THE VIRUS PROTECT WORK?**

Virus Protect is an innovative coating providing lasting protection against viruses, bacteria and fungi that cause infections. Its active molecules penetrate the DNA of microorganisms, which results in their effective destruction. Virus Protect provides long-lasting protection and active disinfection of the fabric surface.

#### **HOW DURABLE IS THE VIRUS PROTECT COATING? HOW CAN I CLEAN MY FURNITURE IN ORDER NOT TO DESTROY THE VIRUS PROTECT COATING?**

Virus Protect does not provide a hygienic protection of our fabrics. It is important to remember about regular vacuuming and maintenance of upholstery fabrics, which will prevent soiling and significantly extend their lifespan. The upholstery fabrics with Virus Protect coating should be cared for according to the instructions (which can be downloaded from the website according to the type of fabric).

By following the care instructions, we can be sure that the coating will maintain its properties up to 30 cycles of wet washing (in a washing machine) and 5 cycles of dry washing (chemical).

**If you want to learn more about VIRUS PROTECT, visit [www.fargotex.pl](http://www.fargotex.pl) and find out how our innovative coating works. Check which of the fabrics in our offer have the unique property of neutralizing bacteria, viruses, fungi and other microorganisms.**
